1. SAFETY REGULATIONS AND NOTES

Please read these operating instructions carefully before starting to work with the device. Observe the following warnings to prevent malfunctions or physical damage to both property and people.

These operating instructions are to be regarded as part of this device. If the device is sold or transferred, the operating instructions must accompany it.

These operating instructions may be duplicated and forwarded for information about potential dangers and their prevention.

1.1 Levels of hazard warnings

These operating instructions use the following hazard levels to indicate potentially hazardous situations and important safety regulations:

DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. Compliance with the measures is mandatory.

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Exercise extreme caution while working.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or damage of property.

A potentially harmful situation can occur and, if not avoided, can lead to property damage.

1.2 Staff qualification

Only specialised electrical personnel may install the device, perform the test run and work on the electrical system.

Only trained and authorised specialist personnel are permitted to transport, unpack, assemble, operate or maintain the device, or to use it in any other manner.

1.3 Basic safety rules

Any safety hazards stemming from the device must be re-evaluated once it is installed in the end device.

Observe the following when working on the unit:

⇒ Do not make any modifications, additions or conversions to the device without the approval of ebm-papst.

1.4 Electrical voltage

- ⇒ Check the electrical equipment of the device at regular intervals, refer to chapter 6.2 Safety test.
- Replace loose connections and defective cables immediately.

DANGER

Electrical load on the device

Risk of electric shock

→ Stand on a rubber mat if you are working on an electrically charged device.

WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait five minutes after disconnecting the voltage at all poles before opening the device.

CAUTION

In the event of failure, there is electric voltage at the rotor and impeller

The rotor and impeller are base insulated

→ Do not touch the rotor and impeller once they are installed.

CALITION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- → Keep out of the danger zone of the device.
- When working on the device, switch off the mains supply voltage and secure the latter from being switched on again.
- \rightarrow Wait until the device stops.
- → After working on the device, remove any used tools or other objects from the device.

1.5 Safety and protective functions

DANGER

Missing safety device and non-functioning safety device

If there is no safety device, you could be seriously injured, for example if you reach into the running device or your hands are sucked into it.

- Operate the device only with a fixed and isolating safety protection and a fixed guard grille. The guard must withstand the kinetic energy of a fan blade detaching at maximum speed.
- → The device is a built-in component. You, the owner/ operator, are responsible for providing adequate protection for the device.
- → Shut down the device immediately if you detect a missing or ineffective protective feature.

1.6 Electromagnetic radiation

Interference from electromagnetic radiation is possible, e.g. in conjunction with open and closed-loop control devices.

If unacceptable emission intensities occur when the fan is installed, appropriate shielding measures have to be taken by the user.

NOTE

Electrical or electromagnetic interferences after integrating the device in installations on the customer's side.

→ Verify that the entire setup is EMC compliant.

1.7 Mechanical movement

DANGER

Rotating device

Body parts that come into contact with the rotor and impeller can be injured.

- → Secure the device against accidental contact.
- → Before working on the system/machine, wait until all parts have come to a standstill.

DANGER

Flying parts

Missing safety devices may cause balancing weights or broken fan blades to be ejected at high speeds, causing bodily harm.

→ Take appropriate safety measures.

WARNING

Rotating device

Long hair, loose items of clothing and jewellery could become entangled and pulled into the device. You could be injured.

- → Do not wear any loose clothing or jewellery while working on rotating parts.
- → Protect long hair by wearing a cap.

1.8 Emission

WARNING

Depending on the installation and operating conditions, a sound pressure level greater than 70 dB(A) may arise. Danger of noise-induced hearing loss

- → Take appropriate technical safety measures.
- → Protect operating personnel with appropriate safety equipment, e.g. hearing protection.
- → Also observe the requirements of local agencies.

1.9 Hot surface

CAUTION

High temperature at the electronics enclosure

Danger of burn injuries

→ Ensure that sufficient protection against accidental contact is provided.

1.10 Storage

- ⇒ Store the device, partially or fully assembled, in a dry and weatherproof manner in the original packing in a clean environment.
- Protect the device from environmental impacts and dirt until the final installation.
- ⇒ We recommend storing the device for a maximum up to one year to guarantee proper operation and longest possible service life.
- ⇒ Even devices explicitly suited for outdoor use are to be stored as described prior to being commissioned.
- Maintain the storage temperature, see chapter 3.6 Transport and storage conditions.

1.11 Disposal

When disposing of the device, please comply with all relevant requirements and regulations applicable in your country.

2. PROPER USE

The device is exclusively designed as a built-in device for moving air according to its technical data.

Any other or secondary use is deemed improper and constitutes a misuse of the device.

Installations on the customer's side must meet the mechanical, thermal and service life-related stresses that can occur.

Proper use also includes:

- Only using the device in stationary systems.
- Carrying out all maintenance.
- Moving air with a density of 1.2 kg/m³.
- Using the device in accordance with the permitted ambient temperature, see chapter 3.6 Transport and storage conditions and chapter 3.2 Nominal data.
- Operating the device with all protective features in place.
- Minding the operating instructions.

Improper use

Using the device in the following ways is particularly prohibited and may cause hazards:

- Operating the device with an imbalance, e.g. caused by dirt deposits or icing.
- Operation in medical equipment with a life-sustaining or lifesaving function.
- Operation with external vibrations.
- Moving solids content in flow medium.
- Painting the device
- · Connections (e.g. screws) coming loose during operation.
- Moving air that contains abrasive particles.
- Moving highly corrosive air, e.g. salt spray mist. Exceptions are devices that are intended for salt spray mist and protected accordingly.
- · Moving air that contains dust pollution, e.g. suctioning off saw dust.
- Operating the device close to flammable materials or components.
- Operating the device in an explosive atmosphere.
- Using the device as a safety component or for taking on safetyrelated functions.
- Operation with completely or partially disassembled or modified protective features.
- In addition, all application options that are not listed under proper use.

3. TECHNICAL DATA

3.1 Product drawing

All measures have the unit mm.

1	Inlet nozzle with bleeder connection for pressure relief (k-factor: 116)
2	Connection line AWG 18 with connector housing AMP order no. 1-480 702-0 with 4 x plug pin AMP order no. 926 885-1

3.3 Data according to ErP directive

Installation category	A
Efficiency category	Static
Variable speed drive	Yes
Specific ratio*	1.01

^{*} Specific ratio = 1 + pfs / 100 000 Pa

	Actual	Request	Request
		2013	2015
Overall efficiency nes	63.3	47.4	51.4
Efficiency grade N	73.9	58	62
Power input Ped / kW	0.98		
Air flow qv / m³/h	3050		
Pressure increase total psf / Pa	681		
Speed n / min-1	2590		

Data established at point of optimum efficiency

3.4 Technical features

Mass	16 kg
Size	310 mm
Surface of rotor	Coated in black
Material of electronics	Die-cast aluminium, coated in black
housing	
Material of impeller	Aluminium sheet
Material of mounting	Sheet steel, hot-galvanised
plate	
Material of support	Steel, coated in black
bracket	
Material of inlet nozzle	Sheet steel, hot-galvanised
Number of blades	7
Direction of rotation	Clockwise, seen on rotor
Type of protection	IP 54
Insulation class	"B"
Humidity class	F4-1
Mounting position	Shaft horizontal or rotor on bottom; rotor
	on top on request
Condensate discharge	Rotor-side
holes	

Operation mode	S1	
Motor bearing	Ball bearing	
Technical features	- Output 10 VDC, max. 10 mA	
	- Tach output	
	- Alarm relay	
	- Integrated PID controller	
	- Motor current limit	
	- PFC, passive	
	- RS485 ebmBUS	
	- Soft start	
	- Control input 0-10 VDC / PWM	
	- Over-temperature protected	
	electronics / motor	
	- Line undervoltage / phase failure	
	detection	
Touch current acc.	<= 3.5 mA	
IEC 60990 (measuring		
network Fig. 4, TN		
system)		
Motor protection	Thermal overload protector (TOP) wired	
	internally	
Protection class	I (if protective earth is connected by	
	customer)	
Product conforming	EN 61800-5-1; CE	
to standard		

For cyclic speed loads, note that the rotating parts of the device are designed for maximum one million load cycles. If you have specific questions, contact ebm-papst for support.

3.5 Mounting data

For depth of screw, see chapter 3.1 Product drawing

⇒ Secure the mounting screws against accidentally coming loose (e.g. by using self-locking screws).

Strength class for	8.8
mounting screws	

You can obtain additional mounting data from the product drawing if necessary.

3.6 Transport and storage conditions

⇒ Use the device in accordance with its protection type.

Max. permissible	+80 °C
ambient motor temp.	
(transp./ storage)	
Min. permissible	-40 °C
ambient motor temp.	
(transp./storage)	

3.7 Electromagnetic compatibility

EMC interference	Acc. to EN 61000-6-2 (industrial	
immunity	environment)	
EMC harmonics	Acc. to EN 61000-3-2/3	
EMC interference	Acc. to EN 61000-6-3 (household	
emission	environment)	

If several devices are switched in parallel on the mains side so that the line current of the arrangement is in the range of 16 - 75 A, then this arrangement conforms to IEC 61000-3-12 provided that the short-circuit power $S_{\rm SC}$ at the connection point of the customer system to the public power system is greater than or equal to 120 times the rated output of the arrangement. It is the responsibility of the installation engineer or operator/owner of the device to ensure, if necessary after consultation with the network operator, that this device is only connected to a connection point with a $S_{\rm SC}$ value that is greater than or equal to 120 times the rated output of the arrangement.

4. CONNECTION AND START-UP

4.1 Connecting the mechanical system

CAUTION

Cutting and crushing hazard when removing the fan from the packaging

- → Carefully remove the fan from its packaging. Make sure to avoid any shock.
- → Wear safety shoes and cut-resistant safety gloves.

CAUTION

Heavy load when taking out the device

Bodily harm, e.g. back injuries, are possible.

- → Two people should remove the device out of its packaging together.
- ⇒ Check the device for transport damage. Damaged devices must no longer be installed.
- Install the undamaged device according to your application.

4.2 Connecting the electrical system

DANGER

Electric voltage on the device

Electric shock

- → Always install a protective earth first.
- → Check the protective earth.

DANGER

Incorrect insulation

Risk of fatal injury from electric shock

- → Use only cables that meet the specified installation requirements for voltage, current, insulation material, load etc.
- → Route cables such that they cannot be touched by any rotating parts.

DANGER

Electrical load (>50 μ C) between mains wire and protective earth connection after switching of the supply when switching multiple devices in parallel.

Electric shock, risk of injury

→ Make sure that sufficient protection against accidental contact is provided.

Before working on the electrical connection, the connections to the mains supply and PE must be shorted.

CAUTION

Electrical voltage

The fan is a built-in component and features no electrically isolating switch.

- → Only connect the fan to circuits that can be switched off with an all-pole separating switch.
- When working on the fan, you must switch off the installation/machine in which the fan is installed and secure it from being switched on again.

NOTE

Interferences and failures are possible

Maintain a distance to the power supply line when routing the control lines of the device.

→ Ensure a sufficiently large clearance. Recommendation: clearance > 10 cm (separate cable routing)

NOTE

Water penetration into leads or wires

Water enters at the cable end on the customers side and can damage the device.

→ Make sure that the cable end is connected in a dry environment

Connect the device only to circuits that can be switched off using an all-pole disconnecting switch.

4.2.1 Prerequisites

- Check whether the data on the type plate agree with the connection data.
- Before connecting the device, ensure that the supply voltage matches the operating voltage of the device.
- Only use cables designed for current according to the type plate. For determining the cross-section, follow the basic principles in accordance with EN 61800-5-1. The protective earth must have a cross-section equal to or greater than the outer conductor cross-section

We recommend the use of 105°C cables. Ensure that the minimum cable cross-section is at least AWG26/0.13 mm².

Earth wire contact resistance to EN 61800-5-1

Compliance with the impedance specifications to EN 61800-5-1 for the protective earth circuit must be verified in the end application.

Depending on the installation situation, it may be necessary to install an additional protective earthing conductor via the additional protective earth connection point available on the device.

The protective earth connection point is located on the housing and has a protective earth symbol and a bore hole.

4.2.2 Power supply connection, fuse protection

Assignment of conductor cross-sections and the fuse protection required for them (overload protection only, no device protection).

Nominal voltage	Safety fuse		Automatic circuit breaker	Wire cross- section	Wire cross- section
	VDE	UL	VDE	mm²	*AWG
3/PE AC 380 - 480 VAC	16 A	15 A	C16A	1.5	16
3/PE AC 380 - 480 VAC	20 A	20 A	C20A	2.5	14
3/PE AC 380 - 480 VAC	25 A	25 A	C25A	4.0	12
3/PE AC 380 - 480 VAC	32 A	30 A	C32A	6.0	10

^{*} AWG = American Wire Gauge

4.2.3 Idle current

Because of the EMC filter integrated for compliance with EMC limits (interference emission and interference immunity), idle currents in the mains cable can be measured even when the motor is at a standstill and the mains voltage is switched on.

- The values lie in a range of typical < 250 mA.
- The effective power in this operating state (readiness for operation) is simultaneously at typical < 5 W.

4.2.4 Residual current operated device

Only universal (type B or B+) RCD protective devices are permitted. Like frequency inverters, RCD protective devices cannot provide personal safety while operating the device. When switching on the power supply of the device, pulsed charge currents from the capacitors in the integrated EMC filter can lead to the RCD protective devices triggering without delay. We recommend residual current devices with a trigger threshold of 300 mA and delayed triggering (super-resistant, characteristic K).

4.2.5 Leakage current

For asymmetrical power systems or if a phase fails, the leakage current can increase to a multiple of the nominal value.

4.2.6 Locked-rotor protection

Due to the locked-rotor protection, the start-up current (LRA) is equal to or less than the nominal current (FLA).

4.3 Connection via plug

4.3.1 Preparing connection lines for the connection

The lines, including customer-side interface, fall within the standard of the internal connection.

Observe product conformity to standards and the type of protection in your end device after you have installed the ebmpapst device.

⇒ Connect the connection lines to the mating connectors.

4.3.2 Establish supply connections

- ⇒ Check the PIN assignment of your connector.
- ⇒ Connect the panel connector and mating connector.
- ⇒ Ensure that the connector is locked in correctly.

4.4 Factory settings

Factory settings with which the device is pre-set by ebm-papst.

Operation mode	PWM controlling	
Group adress	1	
Fan / device adress	1	
Max. PWM / %	100	
Min. PWM / %	0	
Save set value to	Yes	
EEPROM		
Set value control	Analog	
Control function	Positive (heating)	

4.5 Connection screen

Line	No.	Signal	Colour	Function / assignment	
1	1, 2	PE	green/	Protective earth	
			yellow		
1	3, 4, 5	L1, L2, L3	black	Supply voltage 50 / 60 Hz	
1	6	COM	white 1	Floating status contact, break for failure (2 A, max. 250 VAC, min. 10 mA, AC1)	
1	7	NC	white 2	Floating status message contact, break for failure	
2	8	0 - 10 V	yellow	Control input, set value 0 - 10 VDC, impedance 100 kOhm, SELV	
2	11	+ 10 V	red	Voltage output 10 VDC (+/-3%), max. 10 mA, supply voltage for ext. devices (e.g. potentiometer),	
				SELV	
2	12	GND	blue	Reference mass for control interface, SELV	

4.6 Checking the connections

- ⇒ Make sure that the power is off (all phases).
- ⇒ Secure it from being switched on again.
- ⇒ Check the correct fit of the connection lines.
- Route the connecting cables in the terminal box so that the terminal box cover closes without resistance.
- Use all plug screws (the entire number). In doing so, insert the screws manually to avoid damage to the thread.

4.7 Switch on device

WARNING Hot motor housing

Fire hazard

- → Ensure that no combustible or flammable materials are located close to the fan.
- Inspect the device for visible external damage and the proper function of the protective features before switching it on.
- Check the air flow paths of the fan for foreign objects and remove any that are found.
- ⇒ Apply the nominal voltage to the voltage supply.
- Start the device by changing the input signal.

4.8 Switching off the device

Switching off the device during operation:

- ⇒ Switch on the device via the control input.
- Do not switch the motor (e.g. in cyclic operation) on and off via power supply.

Switching off the device for maintenance work:

- ⇒ Switch on the device via the control input.
- Do not switch the motor (e.g. in cyclic operation) on and off via power supply.
- ⇒ Disconnect the device from the supply voltage.
- When disconnecting, be sure to disconnect the earth wire connection last.

5. INTEGRATED PROTECTIVE FUNCTIONS

The integrated protective functions cause the motor to switch off automatically in case of faults described in the table. The status relay drops out and the fault is reported via BUS.

Malfunctions	Description / Function of
	safety feature
Rotor position detection error	An automatic restart occurs.
Locked rotor	⇒ After the blockage is
	removed, the motor restarts
	automatically.
Line under-voltage (mains input	⇒ If the mains supply voltage
voltage outside of permitted	returns to permitted values, the
nominal voltage)	motor restarts automatically.
Phase failure	A phase of the supply voltage
	fails for at least 5 s.
	⇒ If all phases are correctly
	supplied again, the motor
	automatically restarts after 10 -
	40 s.

6. MAINTENANCE, MALFUNCTIONS, POSSIBLE CAUSES AND REMEDIES

Do not perform any repairs on your device. Return the device to ebmpapst for repair or replacement.

WARNING

Terminals and connections have voltage even with a unit that is shut off

Electric shock

→ Wait five minutes after disconnecting the voltage at all poles before opening the device.

CAUTION

If control voltage is applied or a speed setpoint is stored, the motor automatically restarts, e.g. after a power failure. Danger of injury

- → Keep out of the danger zone of the device.
- → When working on the device, switch off the mains supply voltage and secure the latter from being switched on again.
- → Wait until the device stops.
- → After working on the device, remove any used tools or other objects from the device.

If the device remains out of use for some time, e.g. when in storage, we recommend switching the device on for at least two hours to allow any condensate to evaporate and to move the bearings.

Malfunction/error	Possible cause	Possible remedy

6.1 Cleaning

NOTE

Damage to the device during cleaning.

Malfunction possible

- → Do not clean the device using a water jet or high-pressure washer.
- → Do not use any cleaners containing acids, bases or solvents.
- \rightarrow Do not use any pointed or sharp-edged objects to clean.

6.2 Safety test

NOTE

High-voltage test

The integrated EMC filter contains Y capacitors. Therefore, the trigger current is exceeded when AC testing voltage is applied.

→ Test the device with DC voltage when you carry out the high-voltage test required by law. The voltage to be used corresponds to the peak value of the AC voltage required by the standard.
